Young patients
deserve to be safe,
secure and supported.

Nurse designed

QUALIBREATH
Pediatric

Postoperative
Sternum & Thorax Support

Specially after
heart surgery.

Made in Italy

Even if kids recover quicker and get active sooner than adults, it still takes 6 weeks for the sternum to heal!

- Deep breathing
 - Clearing of secretions from the lungs
 - Getting in and out of bed
- Are all tough to do for little patients right after heart surgery.

QUALIBREATH Pediatric

Protects your young patients.

Supports sore respiratory muscles and ribs, so breathing, coughing and activities are less painful.

Simply makes your little patients feel more comfortable and supported - day and night.

Also, it leaves hands free for playing!

QualiBreath Pediatric features:

Shoulder straps with front velcro closure

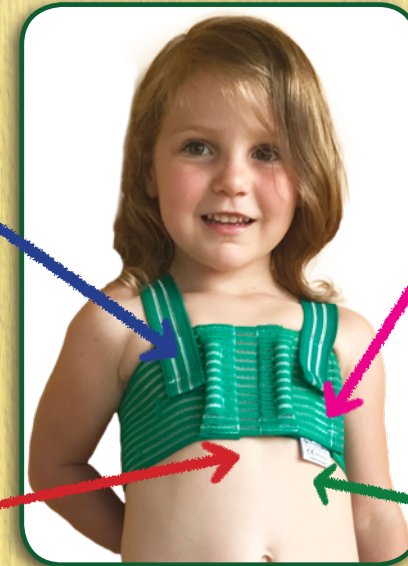

Constant lateral support of sternum

Upper abdominal area free

Front side velcro closure of binder

Constant support of respiratory muscles

Lower lung lobes free

Promotes deeper breathing

Integrated bar-handles

Extra support when coughing, sneezing or straining

Latex free, breathable material

Comfort and pain relief

Safe - Secure - Supported
